

COORDINATION CHEMISTRY REVIEWS, VOL. 168 (1998)

AUTHOR INDEX

Chatterjee, D., 273	Kirsch-De Mesmaeker, A., 233	Pariya, C., 1
Hegedus, L.S., 49	Moucheron, C., 233	Richmond, M.G., 177
Jayaprakash, K.N., 1	Ortmans, I., 233	Sarkar, A., 1

SUBJECT INDEX

-
- | | |
|---|--|
| <p>Alkene metathesis
Alkene metathesis: new developments in catalyst design and application 1</p> <p>DNA interaction
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>DNA photoadducts
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>DNA photocleavages
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>Molybdenum
Alkene metathesis: new developments in catalyst design and application 1</p> <p>Organic synthesis
Transition metals in organic synthesis: highlights for the year 1996 49</p> | <p>Photoelectrochemistry
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>Polypyridine Ru(II) complexes
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>Ring-opening metathetic polymerization (ROMP)
Alkene metathesis: new developments in catalyst design and application 1</p> <p>Ring closing metathesis catalysis
Alkene metathesis: new developments in catalyst design and application 1</p> <p>Spectroelectrochemistry
Ru(II) polypyridine complexes with a high oxidation power. Comparison between their photoelectrochemistry with transparent SnO₂ and their photochemistry with desoxyribonucleic acids 233</p> <p>Transition metals
Transition metals in organic synthesis: highlights for the year 1996 49</p> |
